# MRD-XI-17(A) P-306 MATHEMATICS - (Part-I)

## (Fresh / New Course)

Continu

Section – B & C "Section – B" Total Marks: 80

Marks: 50

#### Q.2 Write short answer of any TEN of the following parts. Each part carries equal marks.

- (i) Show that for all complex numbers  $z_1$  and  $z_2$ ,  $|z_1z_2| = |z_1||z_2|$
- Show that  $\begin{vmatrix} a & b & c \\ l & m & n \\ x & y & z \end{vmatrix} = \begin{vmatrix} a & l & x \\ b & m & y \\ c & n & z \end{vmatrix}$

Time Allowed: 2:40 Hrs

- (iii) Find the terminal point of the vector  $\vec{r} = i + 3j 3k$  if the initial point is (-2,1,4)
- (iv) Insert four arithmetic means between 17 and 32.
- (v) The  $2^{nd}$  term of an H.P is  $\frac{1}{2}$  and the fifth term is  $-\frac{1}{4}$ . Find the  $12^{th}$  term.
- (vi) Write in terms of factorial  $\frac{n(n+1)(n+2)}{3}$
- (vii) A student figures that the probability of passing an algebra test is  $\frac{8}{9}$ . What is the probability of failing the test?
- (viii) Find the coefficient of  $x^9$  in  $\left(x + \frac{3a}{x^2}\right)^{15}$
- (ix) Given that  $f(x) = x^3 ax^2 + bx + 1$  if f(2) = -3 and f(-1) = 0. Find the values of a and b.
- (X) Show that  $\sin(\alpha + \beta)\sin(\alpha \beta) = \cos^2 \beta \cos^2 \alpha$
- Prove that  $\frac{\cos 5\theta + \cos 3\theta}{\sin 5\theta \sin 3\theta} = \cot \theta$
- (xii) If a cone is 8.4cm high and has a vertical angle of 72°, calculate the diameter of its base.
- (Xiii) Draw the graph of  $y = \sin 2x$ ,  $0 \le x \le 2\pi$

### "Section - C"

Marks: 30

# NOTE: Attempt any THREE questions. Each question carries equal marks.

- Q. 3: a) Separate into real and imaginary parts  $\left(\frac{1+\sqrt{3}i}{1-\sqrt{3}i}\right)^{-2}$ 
  - b) Find a unite vector perpendicular to both  $\vec{a} = i + j + 2k$  and  $\vec{b} = -2i + j 3k$
- Q. 4: a) If  $a_{10} = l$ ,  $a_{13} = m$ ,  $a_{16} = n$ ; show that  $l_n = m^2$ 
  - b) Prove by mathematical induction  $\binom{3}{3} + \binom{4}{3} + \binom{5}{3} + \dots + \binom{n+2}{3} = \binom{n+3}{4}$
- Q.5: a) If  $\sin \alpha = \frac{4}{5}$  and  $\sin \beta = \frac{12}{13}$ , and both  $\alpha$  and  $\beta$  are measures of first quadrantal angles, then find  $\cos(\alpha + \beta)$ 
  - b) Solve the triangle for which length of three sides are a=9, b=7 and c=5
- Q. 6: a) Find the rank of  $\begin{bmatrix} 1 & 0 & -2 \\ 2 & 2 & 1 \\ -1 & 2 & 3 \end{bmatrix}$ 
  - b) Prove that  $r \cdot \stackrel{n}{\underset{r}{C}} = n \cdot \stackrel{n-1}{\underset{r-1}{C}}$
